Byron Network

Crypto trading will never be the same with Byron Network. Our goal is to achieve an ecosystem that allows traders to use necessary trading options to guarantee risk control, ease of use and satisfaction. With a constantly growing crypto community we want to step up and make sure that the market is ready for new traders and is able to meet their high expectations.

Unique Value Proposition

Fundamental functionality that characterises decentralised exchanges is going to be enhanced with professional trading options such as limit order or stop loss order. Based on the user feedback the team will flexibly adjust trading possibilities. Byron ecosystem is going to be a fully operative package that ensures clear and easy usability. Think of us as DEX with all the features of CEX: wallet, staking, multichain support and many more. So far we've been building products for our clients. Now we build our own solutions. Thanks to attendance to Plutus Partnership Program we deliver Haskell and Plutus development to IOHK directly.

Products

The first milestone of Byron Network is going to be a HD Mobile Wallet for Cardano launched on the Google Store and Apple Store. Our strategy takes into consideration users initially getting to know Byron Wallet to then smoothly accommodate with Byron DEX. While in December of 2021 Byron DEX is going to be launched on testnet, in the Q2 of 2022 we plan to deliver the exchange on the mainnet to provide the full package. Another step is going to be, along with working on DEX and Mobile improvements, creating a multi chain bridge and ecosystem

Team

Our team comprises experienced developers and knowledgeable crypto experts who are passionate about creating a backbone of crypto trading. Cardano with its uniqueness is a perfect opportunity for our team to show our expertise and contribute to ever growing community. By delivering products based on experience that exceed user expectations we hope to depict the potential behind Cardano Blockchain. Our team has been building blockchain projects for our clients for 5 years already as a BinarApps.com software company. We supported projects such as Everest.org, Brave.com, Dash.org, Asdra.com and Minerva. Having over 5 years of experience allowed us to understand the market and notice the need for releasing a cross-chain solution as well.

Financing

Byron Network is going to be launching Byron Token via Launchpad. Therefore, the community can expect IDO, public and private sale, as well as a seed to guarantee development process and further improvements.
