Byron Network

Crypto trading will never be the same with Byron Network. Our goal is to achieve an ecosystem that allows buyers and sellers to use necessary trading options guaranteeing risk control, ease of use and user satisfaction. With the constantly growing crypto community we aspire to step up to ensure that the market is ready for new crypto traders and capable of meeting their high expectations.

Unique Value Proposition

Fundamental functionality that characterises decentralised exchanges is going to be enhanced with professional trading options, such as limit order or stop loss order. Based on user feedback, the team can flexibly adjust trading possibilities. Byron ecosystem is going to be a fully operative package that ensures clear and easy usability. Think of us as DEX with all the features of CEX: wallet, staking, and multichain support. So far we have only built products for our clients and now we started building our own solutions for the community. Thanks to the attendance in the Plutus Partnership Program, we deliver Haskell and Plutus development outcome to IOHK directly.

Products

The first milestone of Byron Network is going to be a HD Mobile Wallet for Cardano launched in Google Play and Apple stores. Our strategy focuses on allowing users to initially getting familiar with Byron Wallet so that they can smoothly accommodate with Byron DEX after its launch. While Byron DEX is going to be launched on testnet in December 2021, we plan to deliver the exchange on the mainnet already in Q2 of 2022 to provide the full package. Another step involves creating a multi chain bridge and ecosystem along with working on DEX and Mobile improvements.

Team

Our team comprises of experienced developers and knowledgeable crypto experts, passionate about creating the backbone of the crypto trading industry. We have had a 5-year long experience building blockchain projects for our clients as a BinarApps.com software company. We supported projects such as Everest.org, Brave.com, Dash.org, Asdra.com and Minerva. Cardano with its uniqueness is a perfect opportunity for our team to make use of our expertise and contribute to the constantly expanding community. Thanks to the delivery of expectation-exceeding user products we hope to capture the potential behind Cardano Blockchain. Having the years-long yet state-of-the-art experience in the field helped us to understand the market as well as to recognise its need for a release of a cross-chain solution.

Financing

Byron Network is going to launch Byron Token via Launchpad so the community can expect IDO, the public as well as the private sale, in addition to a seed to guarantee development process and further improvements.
